

**Exclusive and Customised Lifts
made in Germany**

Louis Vuitton Townhouse, Selfridges
Pyramidenkogel, Kärnten - Austria

Aquarium lift at Radisson Blu Hotel, Berlin - Germany

Commercial Building, Munich - Germany
Private Villa, Lagos - Nigeria

The GBH Design Company with head office and factory based in Vierkirchen near Munich, Germany, is a specialist in the field of custom-made, non-standard lift systems as well as glass and panoramic lifts.

For more than 40 years GBH Design has been a synonym for innovation, quality, and inventiveness in lift design. Lifts which are decorated with 24 ct gold or Swarovski crystals, rotating round glass lifts or lifts running through the middle of an aquarium - we will realize even the most extraordinary designs.

Each of the lift systems are unique, they are custom-made according to the wishes of our clients. Our lifts meet the highest quality standards and are equipped with top-quality materials.

Design and technology are "Made in Germany". We also design and produce special lift systems for private homes and heritage-protected buildings according to specifications and circumstances.

All our lift constructions are designed and manufactured in compliance with the EN 81 regulations and in accordance with local authorities.

Please feel free to browse our website www.gbh-design.de to gain an insight into our vast and individual range of products and services.

We offer professional advisory services, and the reliable completion of your order with the assistance of our UK representative Elevator Planning (U.K.) Ltd.

Curiosity

The new Louis Vuitton 'Townhouse' is a unique concession space within Selfridges department store. The LV sales area spans three floors, linked by a revolving hydraulic lift within a glass shaft. The glass lift car turns as it rises to reflect the twin illuminated helix displays of iconic Louis Vuitton bags. Hidden inside the display helix are structural steel helix beams, supporting the glass lift and shaft designed by ARUP. At the First and Second floor, where the lift passes through the existing structural floor plate, the lift shaft is surrounded by 70mm thick cantilevered glass 'halo' floor panels.

Taking the concept design produced by Japanese Designers, Curiosity, Wintersgill developed the detail design and construction package, were responsible for all technical and statutory approvals, co-ordinated and supervised specialist fabrication packages and provided liaison for the General, Specialist and Fixture contractors throughout construction.

Wintersgill were also responsible for all Back of House design, construction and fit-out works to the two additional floors below the Townhouse public space.
